

The 360° gasket can be installed onto a Durafil ES³ or Durafil Compac filter. The addition of this gasket creates a complete seal around the entire perimeter of the holding frame.

The 360° gasket is an injection molded TPE polymer that press fits into the profile on both the ES³ and Compac headers. The unique double fin design allows the gasket to form to the inside contour of the holding frame while sealing against the back flange. This creates two sealing barriers helping to keep filter bypass to a minimum.

The 360 gasket is ideal for applications where maintaining filter bypass is crucial.

- Available in 4 sizes: 24x24, 20x24, 12x24 and 20x20
- Continuous design with no joints or gaps in design
- Can be removed and reused
- Works with both Durafil ES³ and Durafil Compac filters
- Double sealing fins

Note: The 360° gasket will not improve the efficiency of the filter.
